

Save time and money with Griffin Ag's
RapiSystems modular structural
system for equipment supports and
access.

RapiTower and *RapiTruss* employ a
simple, robust system of common
structural pieces to configure any
tower, platform or catwalk
requirements for your seed storage
system.

*Planning a new grain handling
build, or expansion to your
existing storage?*

RapiTOWER

RapiTRUSS

RapiSYSTEMS

elements are fabricated from heavy galvanized structural steel sections, with a minimum of welded or custom sheet metal parts. This flexible system can be configured in thousands of ways to suit any tower or catwalk needs, from small to very large bins and equipment.

RapiTRUSS

catwalks and equipment supports are configurable to any required length in 5 foot increments, and supports can be placed at nearly any point along the length, up to 400 feet long. Spans available to suit bins up to 90 feet diameter, in any combination of bin sizes and heights.

RapiTOWER

Sizes from 6 feet wide by 20 feet tall, up to 12 feet wide by 160 feet tall, in 5 foot increments. Towers are easily configured to custom heights & attachments can be configured for any side, at any height.

Optional: Add Wrap around stairs to your Tower

You can now economically add a catwalk or conveyor system to your existing bin arrangement, without specialized custom structures and long fabrication or installation times.
